Q: Bash - How to print file contents with awk I have a file called "Book.txt" and it's contents are as follows: 12345 98765 42015 ... I want to print the number with awk, but I get a huge output of the file "Book.txt" contents: 98765 98765 42015 ... My command is as follows: awk '{ print \$1 " " \$2}' Book.txt How can I get rid of the large output? A: The method you used in your question seems to be doing what you want, so I'm assuming you mean to output the formatted number and book number? Try this: awk '{print \$1 " " \$2}' Book.txt The output will be (including the newline in the end): 12345 98765 42015 ... Q: How to get textbox to display on IE 10? I have a page with an HTML5 textbox that gets an id, name, and value from a serialized object. The issue is that in IE 10, the textbox displays blank and does not take the user input from the textbox. I have a link to a codepen if you want to see the problem for yourself. Here is my HTML for the textbox: I also tried this with no luck:

HIGHLIGHTS The government is believed to have told 'cryptocurrency related' entities to keep off the stock exchange. Tata group, HDFC Bank, ICICI Bank and Axis Bank are among the entities to be told to stop trading. The government is believed to have told 'cryptocurrency related' entities to keep off the stock exchange. "No entity engaged in cryptocurrency-related activities in India should seek listing in India's stock exchanges," the Ministry of Corporate Affairs told NDTV. What is the big deal about cryptocurrency? It's not really a currency. It's a digital asset that is created and is used to pay for things. It's still not sure if it qualifies as a currency or a commodity or a security. The government says that is the market, that's where the consumer goes to buy and sell the stuff. What are the regulations? They are not clear. In February, the government had banned Bitcoin and crypto currencies but those bans have now been relaxed. Why is the government cracking down on this? The government says it's concerned about their lack of regulation. Yes, it's unregulated. But it's also not a banned one. And it's hardly unregulated, because it's traded in countries like the US, South Korea, Japan. When we talked to the financial sector in Delhi, they said that when banks got into trading in bitcoin, they lost Rs 4,000 crore in a month. And India is a big market for bitcoin, so the government says that we need to regulate this. What is the government's solution? The government says it's going to be a rule based system and not a prohibition based system. Also, it's going to be a system to let people buy and sell only on regulated exchanges, and people can't trade on other exchanges. A programmable logic device (PLD) is a semiconductor integrated circuit that contains digital logic circuitry, programmable to perform specific logic functions. Most PLDs are field-programmable, that is, once manufactured, the circuits on a PLD can be reprogrammed, or reconfigured, by the user. The PLD contains, for example, configurable logic blocks (CLBs), programmable interconnects (PIs), and input/output blocks (IOBs). The logic and interconnect circuitry within the PLD are interconnected to each 2d92ce491b
