

# Download

The screenshot shows a file listing interface. At the top, it says "File was found and ready to download!" and "UPDATED 14 HOURS AGO". The "Fastest Source" is listed as "useget.nl". Below this, there is a "Download" button with a downward arrow icon. To the left of the button, there is a rating of "6.4" with five stars and the text "2001 YEARS". To the right of the button, it says "SECURE SCANNED". Below the main content, there is a note: "You need to [log in](#) before you can post comments." At the bottom, there are three navigation links: "Navigation" with a menu icon, "Registration" with a person icon, and "FAQ" with a question mark icon.

(188.82KB) Solution 1 From the above manual, if you execute "update-initramfs -e -k", this means that only the needed files in the img file are updated. Note that this is different to what you are doing, since you are "flushing" the data. Solution 2 You can also check the "files" (file system) inside the kernel image. To do that, you can use the command "lsblk" or "df -Th". After that, you can manually modify the list by deleting the images that you don't need (if there are any, of course). Solution 3 If you decide to use the "flushing" method, you must know that the data is on the same "files" of the kernel image. So, for example, if you have to delete the "files" "rootfs" and "fs" in order to "flush" your data, you can use "lsblk -f | grep rootfs | awk '{print \$1}'" or "df -Th | grep rootfs | awk '{print \$1}'". After that, execute "mkdir -p /tmp/new\_rootfs" and put the output of the command there. Now, to delete the filesystem, use the command "sudo umount /tmp/new\_rootfs". To create the image, use "dd if=/tmp/new\_rootfs of=/dev/sdX bs=4M" where /dev/sdX is the partition in which you have your kernel (I'm not sure of the format of this partition). Or, if you want a complete guide on the samsung manual, you can see this link: [!\[\[\[edinbmedj73960-0028\)\]{#sp1.409} !\[\[\[edinbmedj73960-0029\)\]{#sp2.410} !\[\[\[edinbmedj73960-0030\)\]{#sp3.411} !\[\[\[edinbmedj73960-0031\)\]{#sp4.412} !\[\[\[edinbmedj73960-0032\)\]{#sp5.413} Q: Can a method on a static object ever receive a reference to a global variable?
