CoD4 1.7 Crack + Serial Key [Latest] Download CoD4 1.7 Crack + Serial Key Full Generator [Updated] [Latest] CoD4 1.7 Crack + Serial Key [Latest] Download CoD4 1.7 Crack + Serial Key Full [Updated] [Latest] .Q: How to remove an element from the DOM with no leftovers in IE8 I have come to the stage where I am abusing document.createElement to add a div to the body, which leaves it there. I would like the behavior to be the same as having a div with style="display:none;" but it seems to be IE8 specific. Here is what I have tried: document.body.appendChild(document.createElement('div', 'class' + 'hide')); document.body.appendChild(document.createElement('div')); document.body.removeChild(document.body.firstChild); But none seem to work. Does anyone know a method which will remove the element without generating any unwanted leftovers? A: DOM methods on element nodes have to have fully qualified names in IE. document.body.removeChild(document.body.firstChild); You have to remove the element by name (rather than by index). Why? Because IE doesn't tolerate the fact that none of its node names are stable. The node names used by the browser change completely. So using just document.body.firstChild, you can't be sure what your node will become in the next

version of IE, even if it is still the same node. Which is bad. The way to remove a node like this is to remove it by name. Each node has a name of the form . For example: document.body.firstChild has the name HTMLBodyElement.FirstChild
document.body.firstChild.name has the name HTMLBodyElement So the code to remove it is:
document.body.firstChild.name = undefined; BTW, you don't have to write the entire tag name. The name will be the same if you only write the tag name:
document.body.firstChild.name = undefined; // Works
But if you write a list of tags after the node name:
document. ba244e880a
