Extensions are the adding together of short bits of code that extend or enhance the functionality of Winamp Classic or Winamp 2.x. It consists of a framework with a standard library of various classes, designed to be class-based and generic. Each class is a powerful abstract class from which specific classes, specific to a particular task, can be derived. For example, the Framework.Classes.CodecCollection has numerous subclasses of itself, representing various types of codecs. This article will discuss the basics of making extensions, starting with a walkthrough of the standard extension support framework, and then moving on to give a more detailed description of how to create your own extensions.
